AHK Script Files for Auto-Logging QSO

If you already tried the new contest module for FT Challenge you probably know that WSJT option Setting/Reporting/Log Automatically (contest only) is not working because there is now "suitable" contest in Settings/Advanced/Special operating activity window in WSJT-X. To make logging automatically work for this contest I created 2 AHK scripts that you can find here:

https://n1mmwp.hamdocs.com/mmfiles/ahk-script-files-for-auto-logging-qso-in-ft-challenge-contest/

1. Download the file WSJT_Auto_Log_N_Sec.zip, unzip it and copy both files into some folder in your computer.
2. Download and install AHK software (Version 2.0) from here: https://www.autohotkey.com/ 3. Run one of .ahk files you downloaded from N1MM Logger+ website (right click on the file name/Run Script). Do it once before the contest. The script will be running until you stop it (you can find it in the lower right corner of the screen) or by restarting Windows.

Once one of those files is running every time the Log window from WSJT-X pops up it will be closed by the AHK script by clicking on "Enter" button (just like you would do to log QSO).
The script file WSJT_Auto_Log_1_Sec.ahk will do it within ~1 sec. The other one (WSJT_Auto_Log_1_Sec.ahk) will give you about 6 sec. to look at the QSO data and probably correct something.
You can adjust the delay that will keep Log widow open by editing line 11 (... Sleep 6000 ...). The time is in ms.

Both AHK scripts were tested with WSJT-X v. 2.7.1-devel version but they should work with any version as well.
